

For the use of a veterinarian or a Hospital or a Laboratory or a Farm.

Amitraz Dip Concentrate Liquid I P

Taktic® 5% E C

Mange, Tick and Lice wash for Dogs.

NOT FOR HUMAN USE - FOR ANIMAL TREATMENT ONLY

For External Use only - NOT FOR USE IN AQUACULTURE

Composition

Each ml Contains :
Amitraz I P 50 mg
Solvent & Emulsifiers q.s.

Preparation

Taktic® is a highly effective ectoparasiticide constituting the unique active ingredient amitraz. Its exceptional acaricidal and insecticidal activity against a broad spectrum of ticks, mange mites, lice and ked has been demonstrated in extensive field trials and commercial use throughout the world. It is effective in all the life cycle stages of ectoparasites and also in those species resistant to organochlorine, organophosphate, carbamate and synthetic pyrethroid compounds. Since it does not accumulate in animal tissues and has very low mammalian toxicity, it is extremely safe for animals as well as the human beings.

Indications

Acaricidal (Mange mites, Ticks and Lice) wash for Dogs.

Recommended Dosage

Mange 10ml /litre of water
Ticks & Lice 6ml / litre of water

Directions for Use

If necessary, wash dog to remove dirt and grease. Long-haired animals can be clipped prior to treatment if required. Prepare the dog wash by adding the appropriate amount of Taktic® to the required volume of clean warm water, stirring to ensure complete mixing. Prepare only the required amount of wash for each individual treatment. Diluted fouled wash becomes unstable upon prolonged standing. Sufficient solution should be prepared to allow complete immersion of the dog's paws and to enable complete wetting of the animal. Stand the dog in a basin or sink and pour Taktic® wash over the animal, gently working into the skin and hair with a soft brush or sponge to ensure that the dog is thoroughly wetted to the skin in all areas.

Do not rinse the dog but remove it from the bath and allow it to dry in a warm dust-free place.

Avoid handling the dog after treatment until the coat is dry.

Repeat the treatment at intervals of 5-7 days until neither live mites nor viable eggs can be identified microscopically by skin scrapings. In the absence of a facility to determine the degree of control by skin scrapings, continue treatment for at least 3 weeks i.e. 3-4 treatments till the overt clinical symptoms have subsided.

Contraindications and Warnings

Do not treat dogs suffering from heat stress.

This product is not recommended for use on cats, horses and Chihuahua breed of dog.
Keep Out of Reach of Children

Safety

Taktic® rarely produces side effects if used as directed. Very occasionally mild transient sedation may occur. Recovery is spontaneous.

Precautions

For use only under a veterinarian's instructions.

Wear water proof gloves and apron. Wash thoroughly after use, especially the insides of gloves. Avoid any contact of the product with the skin or eyes. In case of contamination wash thoroughly with soap and water. Do not eat, drink or smoke whilst using the product. Dispose off diluted product immediately after use by pouring down the drain. Do not re-use empty containers. When treatment is completed wash hands thoroughly before eating, drinking or smoking.

Guide to Doctor- Amitraz is not an organophosphorus compound. If poisoning is suspected, treatment should be symptomatic and supportive, paying particular attention to monitoring of respiratory and cardiac functions. However, recovery is normally spontaneous. Do NOT use Atropine. Do NOT induce vomiting. Medical management is gentle gastric lavage followed by symptomatic and supportive treatment. Emesis is contraindicated because of the risk of entry of solvent content into the lungs.

Protection of Environment

Taktic® is harmful to fish. Do not allow material to enter watercourses or contaminate ponds, waterways and ditches with licensed product formulation or used container.

Storage

Store in original containers tightly closed away from feedstuff

PROTECT FROM FROST - DO NOT USE ON HORSE
